ING EXPERIMENTAL P  
LOW ENERGY ANTIPRO  
elsch<sup>1</sup>, University of Liverpool/Coc

proton ring (ELENA) is a  
ton Deselerator (AD) at  
D18. ELENA will signifi-  
cantly improve the effi-  
ciency of low energy anti-  
matter production. To fully exploit  
these advances are required in-  
creased model beam transport,  
diagnostics tools and detec-  
tion systems, as well as  
advantage of the enhanced  
production. These research  
European research and train-  
ing network 'Validating Antimatter  
(VANA)'. This paper presents re-  
sults on the performance of ultra-thin  
silicon and optimization of  
efficient integration and  
organic detectors.

**CONCLUSION**  
Validating Antimatter physics)  
ing Network (ITN) that has  
within the H2020 Ma-  
[1]. The project enables an  
interdisciplinary and cross-sector program on antimatter  
R&D. The network includes most of the European exper-
